June 2024

The information contained in this Ventana Research Buyers Guide provides a baseline of knowledge that enterprises can use to evaluate the sophistication of software providers and products in the area of financial consolidation and close. Our findings are drawn from thorough, research-based analysis of product and customer experience categories that best represent how an enterprise should evaluate software providers.

Nothing in this report or our research is intended to imply that one software provider or product is the right choice for any one particular enterprise. Rather, our goal is to provide an objective rating of software providers and products related to the topic of this Buyers Guide using our research methodology and blueprint for successful evaluation and selection. We performed this research independent of any external influence, charged no fees for any software provider to participate in the research and invited all relevant providers that met our inclusion criteria. This report includes products generally available as of May 31, 2024.

The complete Buyers Guide report and research is available to be licensed for use across an enterprise or the internet. We provide insights on the technology industry, software categories and providers related to this Buyers Guide to enterprises through our Ventana On-Demand research and advisory service. We also offer assessment services using this research to help discover and provide guidance on software provider selection.

We certify that Ventana Research performed this research to the best of our ability, that the analysis is a faithful representation of our knowledge of software providers and products, and that the ratings are our own.

Financial Consolidation and Close

The financial records of an enterprise must be periodically reviewed and summarized to create financial statements that inform executives and interested third parties of the organization's financial condition and performance. A consolidation of the financial records and other departmental close processes involves an intricate set of repeated processes that must be performed in a prescribed order and fashion. Enterprise software enables finance and accounting departments to be more productive throughout the close by automating calculations, coordinating the execution of processes and facilitating communication among participants. The desire to make the department more productive and resilient has led to increased investment in technology to assist in performing the full consolidate and close cycle.

This guide examines software that manage the financial consolidation process as well as assists in managing other accounting close processes. Ventana Research defines

The desire to make the department more productive and resilient has led to increased investment in technology to assist in performing the full consolidate and close cycle.

consolidation software as an application that manages the financial consolidation process in conformance with accounting standards for enterprises with complex requirements. All accounting or ERP systems will perform a statutory consolidation of the accounts handled in that system using the generally accepted accounting principles of that parent company. But this approach is inadequate for enterprises that, for example, have accounting systems from multiple providers or other complicating factors that necessitate a separate system. We define close management software as applications that support the timely and efficient completion of close cycle tasks, especially automating reconciliations and performing process management functions.

Consolidation is necessary when an organization has multiple legal entities, subsidiaries, joint ventures or other forms of ownership or control of operating units.

The financial consolidation process involves eliminating intercompany transactions and balances to provide a comprehensive and accurate view of the organization's financial condition and performance. The consolidation process and its methods are tightly prescribed by financial accounting authorities and can be quite complex.

However, consolidation is only part of the financial or accounting close, which is the process of finalizing a company's financial statements at the end of an accounting period, such as a month, quarter or year. During the financial close, all financial transactions are reconciled, reviewed and adjusted as needed to prepare the financial statements. These include the balance sheet, income statement, cash flow statement and the statement of shareholders'

equity. This process is essential for ensuring the accuracy and completeness of financial reporting, and it is often a critical step in meeting regulatory requirements and providing stakeholders with a clear picture of the company's financial performance.

In all but the smallest enterprises, consolidation and close processes require coordination and collaboration. Software assists in ensuring that steps in the processes are handled completely and correctly, collaboration is assisted by direct communications, documents and notations by participants are easily accessed and necessary reviews and sign-offs are performed. Those managing the process are assisted in being able to monitor progress and provide alerts when issues arise.

Consolidation and close management software has improved, incorporating real-time integration with source systems. This is important because of the myriad last-minute adjustments and corrections that take place during the consolidation process. Systems now offer more effective collaboration features to smooth the process and ensure resiliency, including secure data sharing as well as centralized document storage for working papers and supporting evidence. For enterprises with especially complex structures and reporting requirements, the ability to consolidate using multiple accounting standards at different levels and branches of the corporate hierarchy can be useful.

Another factor driving the adoption of dedicated software is the desire to shorten the accounting close. The accounting or financial close is the process of finalizing a company's financial statements at the end of an accounting period, such as a month, quarter or year. During the financial close, all financial transactions are reviewed and adjusted, and the financial statements are prepared, including the balance sheet, income statement, cash flow statement and the statement of shareholders' equity. This process is important for ensuring the accuracy and completeness of financial reporting, and it is often a critical step in meeting regulatory requirements and providing stakeholders with a clear picture of the company's financial performance. ISG-Ventana Research asserts that by 2027, one-half of midsize and larger enterprises will use close management software to speed the close and achieve greater control of the process.

Consolidate and Close Management
Market Assertion

By 2027, one-half of midsize and larger enterprises will use close management software to speed their close and achieve greater control of the process.

Robert Kugel, CFA
Executive Director, Business Research

VENTANA RESEARCH NOW PART OF ISG

There has been agreement that organizations should complete the accounting close within a business week. Workflow automation is especially useful in handling the close-consolidate-report cycle, specifically to manage the process in a hybrid working environment and for organizations that span the globe. As with any workflow-enabled process, administrators spend far less time ensuring individuals have started or completed their tasks, hand-offs are

smoother and, where reviews and approvals are required, these events are recorded and easily accessed by external and internal auditors and support assertions by executives that internal controls and procedures have been followed.

In accounting, the term reconciliations refers to any process that compares two sets of records to ensure their accuracy and consistency—an inherent component of the double-entry framework. This typically involves comparing financial transactions or balances from different sources, such as bank statements versus accounting records or intercompany transactions between different subsidiaries of a company. The main objective is to ensure that the books balance by identifying and resolving discrepancies between two sets of records, ensuring that the accounting data is accurate. Automating reconciliations, especially intercompany transactions, makes the staff more productive and makes the department a more attractive place to work.

Workflow-enabled systems also contribute to a smoother close because consolidating and closing the books should be almost exactly the same from one period to the next, including processes for handling exceptions and unexpected events and managing the close calendar. With workflow, the controller and chief accounting officer can spend less time on administration while having greater situational awareness and control.

It's likely that advances provided by artificial intelligence (AI) and even generative AI (GenAI) will make dedicated consolidation and close software an even more compelling choice.

Today's technology can help finance and accounting executives make their departments more productive in ways that improve the working environment and make it possible for them to attract and retain the best talent in a resource-constrained environment. It's likely that advances provided by artificial intelligence (AI) and even generative AI (GenAI) will make dedicated consolidation and close software an even more compelling choice, especially in a time of growing complexity in accounting standards and tax laws. While accounting relies on doing the same things consistently, how they are done is always evolving because of legal and regulatory changes as well as the constant change in how accounting principles are reflected in processes. A continuous improvement mindset is necessary to have the adaptability and resilience to remain productive. Software designed to assist in managing the accounting close is a necessary tool for financial executives.

The capability frameworks for the Financial Consolidation, Close Management and Consolidation and Close Management Buyers Guides are as follows:

Consolidation

Methods for managing:

- Consolidation processes
- Ownership structures
- Currency
- Intercompany management
- Journals
- Roll-up structures
- Multi-GAAP reporting
- Data validation
- Collaboration, compliance and auditing
- Application of AI/Gen AI to processes

Close Management

Methods for managing:

- Reconciliations
- Process and administration
- Journals
- Analysis and reporting
- Collaboration, compliance and auditing
- Application of AI/Gen AI to processes

For inclusion in the Ventana Research Financial Consolidation and Close Management Buyers Guide for 2024, a software provider must have a standalone application (not functionality included in an ERP or accounting system), be in good standing financially and ethically, have at least \$25 million in annual or projected revenue, more than 50 employees, sell products and provide support on at least two continents and have at least 25 customers. The principal source of the relevant business unit's revenue must be software-related with at least one major software release in the last 12 months. The product must be capable of accessing data from a variety of sources as well as guiding and managing the consolidation and close processes in an enterprise. The required criteria includes:

- Capabilities for Consolidation, such as consolidation process management, consolidation, intercompany management, journals and optionally support for auditing and NLP and AI capabilities. These are the essential functions of a financial consolidation.
- Support for Close Management, such as process management, reconciliations management, journal creation and management and analysis and reporting, and optionally include audit facilitation and NLP and AI capabilities. These are necessary to improve efficiency and productivity of the accounting staff and ensure the smooth and consistent completion of close processes.

This research evaluates the following software providers that offer products to address key elements of financial consolidation and close management as we define it: Board, Fluence Technologies, Oracle, Prophix, SAP, Vena Solutions and Wolters Kluwer.

Buyers Guide Overview

For over two decades, Ventana Research has conducted market research in a spectrum of areas across business applications, tools and technologies. We have designed the Buyers Guide to provide a balanced perspective of software providers and products that is rooted in an understanding of the business requirements in any enterprise. Utilization of our research

Ventana Research has designed the Buyers Guide to provide a balanced perspective of software providers and products that is rooted in an understanding of business requirements in any enterprise.

methodology and decades of experience enables our Buyers Guide to be an effective method to assess and select software providers and products. The findings of this research undertaking contribute to our comprehensive approach to rating software providers in a manner that is based on the assessments completed by an enterprise.

This Ventana Research Buyers Guide: Financial Consolidation and Close is the distillation of over a year of market and product research efforts. It is an assessment of how well software providers' offerings address enterprises' requirements for financial consolidation and close software. The index is structured to support a request for information (RFI) that could be used in the request for proposal (RFP) process by incorporating all criteria needed to evaluate, select, utilize and maintain relationships with software providers. An effective product and customer experience with a provider can ensure the best long-term relationship and value achieved from a resource

and financial investment.

In this Buyers Guide, Ventana Research evaluates the software in seven key categories that are weighted to reflect buyers' needs based on our expertise and research. Five are product-experience related: Adaptability, Capability, Manageability, Reliability, and Usability. In addition, we consider two customer-experience categories: Validation, and Total Cost of Ownership/Return on Investment (TCO/ROI). To assess functionality, one of the components of Capability, we applied the Ventana Research Value Index methodology and blueprint, which links the personas and processes for financial consolidation and close to an enterprise's requirements.

The structure of the research reflects our understanding that the effective evaluation of software providers and products involves far more than just examining product features, potential revenue or customers generated from a provider's marketing and sales efforts. We believe it is important to take a comprehensive, research-based approach, since making the wrong choice of financial consolidation and close technology can raise the total cost of ownership, lower the return on investment and hamper an enterprise's ability to reach its full

performance potential. In addition, this approach can reduce the project's development and deployment time and eliminate the risk of relying on a short list of software providers that does not represent a best fit for your enterprise.

Ventana Research believes that an objective review of software providers and products is a critical business strategy for the adoption and implementation of financial consolidation and close software and applications. An enterprise's review should include a thorough analysis of both what is possible and what is relevant. We urge enterprises to do a thorough job of evaluating financial consolidation and close systems and tools and offer this Buyers Guide as both the results of our in-depth analysis of these providers and as an evaluation methodology.

How To Use This Buyers Guide

Evaluating Software Providers: The Process

We recommend using the Buyers Guide to assess and evaluate new or existing software providers for your enterprise. The market research can be used as an evaluation framework to establish a formal request for information from providers on products and customer experience and will shorten the cycle time when creating an RFI. The steps listed below provide a process that can facilitate best possible outcomes.

1. Define the business case and goals.
Define the mission and business case for investment and the expected outcomes from your organizational and technological efforts.
2. Specify the business needs.
Defining the business requirements helps identify what specific capabilities are required with respect to people, processes, information and technology.
3. Assess the required roles and responsibilities.
Identify the individuals required for success at every level of the enterprise, from executives to frontline workers, and determine the needs of each.
4. Outline the project's critical path.
What needs to be done, in what order and who will do it? This outline should make clear the prior dependencies at each step of the project plan.
5. Ascertain the technology approach.
Determine the business and technology approach that most closely aligns to your enterprise's requirements.
6. Establish software provider evaluation criteria.
Utilize the product experience: Adaptability, Capability, Manageability, Reliability and Usability, and the customer experience in TCO/ROI and Validation.
7. Evaluate and select the technology properly.
Weight the categories in the technology evaluation criteria to reflect your enterprise's priorities to determine the short list of software providers and products.
8. Establish the business initiative team to start the project.
Identify who will lead the project and the members of the team needed to plan and execute it, with timelines, priorities and resources.

The Findings

All of the products we evaluated are feature-rich, but not all the capabilities offered by a software provider are equally valuable to types of workers or support everything needed to manage products on a continuous basis. Moreover, the existence of too many capabilities may be a negative factor for an enterprise if it introduces unnecessary complexity. Nonetheless, you may decide that a larger number of features in the product is a plus, especially if some of them match your enterprise’s established practices or support an initiative that is driving the purchase of new software.

Factors beyond features and functions or software provider assessments may become a deciding factor. For example, an enterprise may face budget constraints such that the TCO evaluation can tip the balance to one provider or another. This is where the Value Index methodology and the appropriate category weighting can be applied to determine the best fit of software providers and products to your specific needs.

Overall Scoring of Software Providers Across Categories

The research finds Oracle atop the list, followed by SAP and Board. Companies that place in the top three of a category earn the designation of Leader. Board has done so in all seven of the seven categories; Oracle in six; SAP in five and Vena Solutions in three categories.

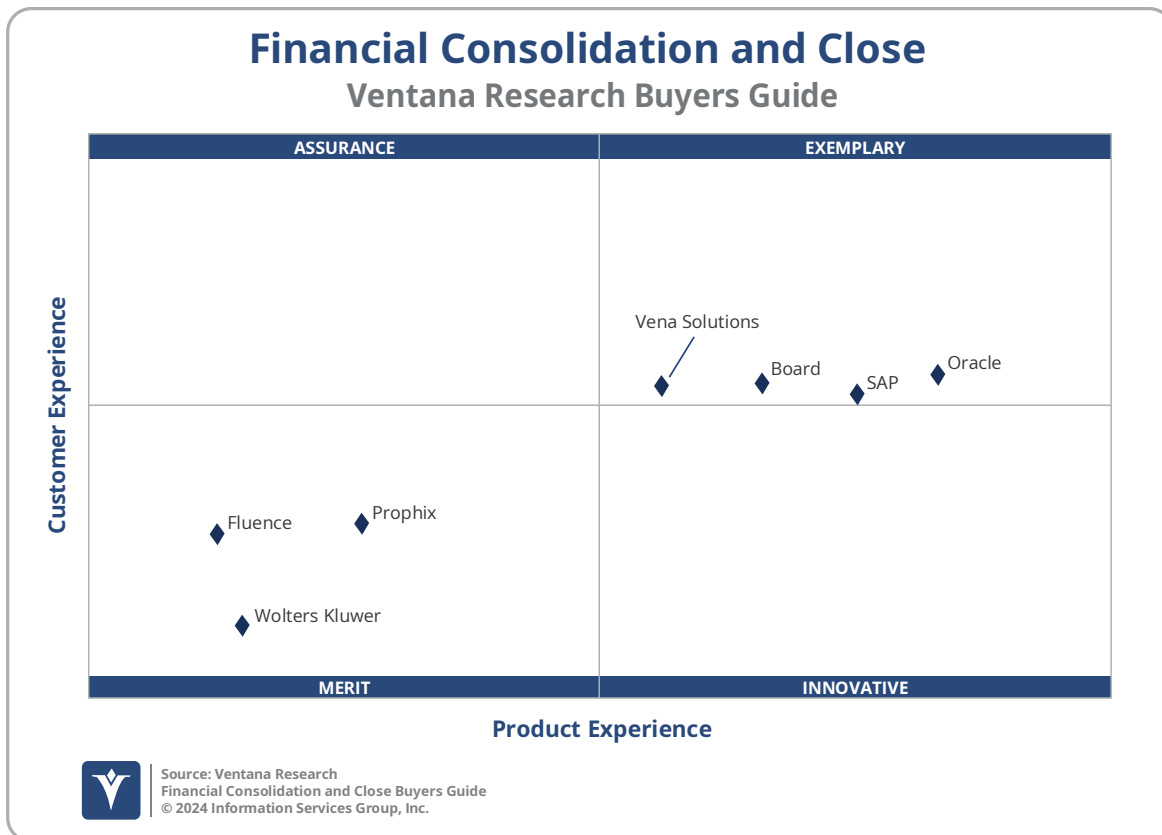

The overall representation of the research below places the rating of the Product Experience and Customer Experience on the x and y axes, respectively, to provide a visual representation and classification of the software providers. Those providers whose Product Experience have a higher weighted performance to the axis in aggregate of the five product categories place farther to the right, while the performance and weighting for the two Customer Experience categories determines placement on the vertical axis. In short, software providers that place closer to the upper-right on this chart performed better than those closer to the lower-left.

The research places software providers into one of four overall categories: Assurance, Exemplary, Merit or Innovative. This representation classifies providers’ overall weighted performance.

Financial Consolidation and Close Overall

Providers	Grade	Performance
Oracle	A-	Leader 84.7%
SAP	A-	Leader 82.7%
Board	A-	Leader 81.6%
Vena Solutions	B++	78.9%
Prophix	B+	70.9%
Fluence	B+	70.8%
Wolters Kluwer	B+	69.7%

Source: Ventana Research
Financial Consolidation and Close Buyers Guide
© 2024 Information Services Group, Inc.

Exemplary: The categorization and placement of software providers in Exemplary (upper right) represent those that performed the best in meeting the overall Product and Customer Experience requirements. The providers rated Exemplary are: Board, Oracle, SAP and Vena Solutions.

Merit: The categorization of software providers in Merit (lower left) represents those that did not exceed the median of performance in Customer or Product Experience or surpass the threshold for the other three categories. The providers rated Merit are: Fluence Technologies, Prophix and Wolters Kluwer.

We warn that close provider placement proximity should not be taken to imply that the packages evaluated are functionally identical or equally well suited for use by every enterprise or for a specific process. Although there is a high degree of commonality in how enterprises handle financial consolidation and close, there are many idiosyncrasies and differences in how they do these functions that can make one software provider’s offering a better fit than another’s for a particular enterprise’s needs.

We advise enterprises to assess and evaluate software providers based on organizational requirements and use this research as a supplement to internal evaluation of a provider and products.

Product Experience

The process of researching products to address an enterprise’s needs should be comprehensive. Our Value Index methodology examines Product Experience and how it aligns with an enterprise’s life cycle of onboarding, configuration, operations, usage and maintenance. Too often, software providers are not evaluated for the entirety of the product; instead, they are evaluated on market execution and vision of the future, which are flawed since they do not represent an enterprise’s requirements but how the provider operates. As more software providers orient to a complete product experience, evaluations will be more robust.

The research results in Product Experience are ranked at 80%, or four-fifths, of the overall rating using the specific underlying weighted category performance. Importance was placed on the categories as follows: Usability (20%), Capability (20%), Reliability (15%), Adaptability (10%) and Manageability (15%). This weighting impacted the resulting overall ratings in this research. Oracle, SAP and Board were designated Product Experience Leaders. While not a Leader, Vena Solutions was also found to meet a broad range of enterprise product experience requirements.

Many enterprises will only evaluate capabilities for workers in IT or administration, but the research identified the criticality of Usability (20% weighting) across a broader set of usage personas that should participate in financial consolidation and close.

Financial Consolidation and Close Product Experience

Providers	Grade	Performance
Oracle	A-	Leader 69.4%
SAP	A-	Leader 67.5%
Board	B++	Leader 66.0%
Vena Solutions	B++	63.5%
Prophix	B+	57.0%
Wolters Kluwer	B+	55.2%
Fluence	B+	55.0%

Source: Ventana Research
Financial Consolidation and Close Buyers Guide
© 2024 Information Services Group, Inc.

Adaptability of the Product

This category assesses the degree to which products and technology can be adapted to an enterprise’s specifications via configurability and customization while still maintaining integrity of integration across the worker, device, business, processes, application and data.

Adaptability is also related to the ability to readily integrate with other internal and external systems—for example, integrate data and information securely across processes and systems—and support bidirectional data flows to support synchronization and migration. It also examines the investment by the software provider in resources and improvements.

The research weights Adaptability at 10% of the overall rating. SAP, Oracle and Board are the Leaders in this category.

Adaptability is an essential evaluation metric as it determines the flexibility and interconnectivity of the software provider’s product related to enterprise requirements. It also enables enterprise software to operate across the variety of platforms and cloud computing environments that exist today and in the future.

Several software providers evaluated quite well in providing depth for the Adaptability category and performed competitively. Enabling the processing of data across business processes, workflows and applications as they operate is critical to preparing and using information to optimize business execution. Providers that performed well have ensured they meet the specific customization and integration support requirements of enterprises.

Financial Consolidation and Close Adaptability

Providers	Grade	Performance
SAP	A	Leader 89.2%
Oracle	A	Leader 87.5%
Board	A-	Leader 86.8%
Vena Solutions	B++	77.9%
Prophix	B++	76.7%
Fluence	B++	75.5%
Wolters Kluwer	B+	70.5%

Source: Ventana Research
Financial Consolidation and Close Buyers Guide
© 2024 Information Services Group, Inc.

Capability of the Product

The Capability criteria are designed to assess the functions and features that support full range of requirements for performing statutory financial consolidations that conform to the generally accepted accounting standards applicable to an enterprise across a full range of ownership structures and currencies, reconciliations and reporting and analysis. Process management and support for collaborative work is assessed, as is support for auditors. The evaluation also includes the availability of natural language processing and AI in the software. It also assessed the functions and features that facilitate the management and execution of financial close tasks and processes.

Ventana Research evaluated more than 66 different function points in six sections to assess the full scope of financial consolidation and close capabilities. It also examined the investment by the software provider in resources and improvements.

The research weights Capability at 20% of the overall rating. Oracle, SAP and Board are the Leaders in this category. While not a Leader, Vena Solutions was also found to meet a broad range of enterprise financial consolidation and close requirements. Six of the seven providers achieved over 70% performance, demonstrating the small separation of sophistication among software providers and products.

The significant, in-depth Capability evaluation framework for financial consolidation and close software is necessary for a mature software category, since the basic functionality is widely available but how the applications are organized as well as their administrative overhead and flexibility matters, especially to larger or more complex enterprises. The basic financial consolidation and close capabilities for business are present across the majority of software providers, giving enterprises a significant choice in the products they use.

Financial Consolidation and Close Capability

Providers	Grade	Performance
Oracle	B++	Leader 80.2%
SAP	B++	Leader 77.1%
Board	B++	Leader 76.6%
Vena Solutions	B+	74.8%
Fluence	B+	72.7%
Wolters Kluwer	B+	71.6%
Prophix	B	66.7%

Source: Ventana Research
Financial Consolidation and Close Buyers Guide

Customer Experience

The importance of a customer relationship with a software provider is essential to the actual success of the products and technology. The advancement of the Customer Experience and the entire life cycle an enterprise has with its software provider is critical for ensuring satisfaction in working with that provider. Technology providers that have chief customer officers are more likely to have greater investments in the customer relationship and focus more on their success. These leaders also need to take responsibility for ensuring this commitment is made abundantly clear on the website and in the buying process and customer journey.

The research results in Customer Experience are ranked at 20%, or one-fifth, using the specific underlying weighted category performance as it relates to the framework of commitment and value to the software provider-customer relationship. The two evaluation categories are Validation (10%) and TCO/ROI (10%), which are weighted to represent their importance to the overall research.

The software providers that evaluated the highest overall in the aggregated and weighted Customer Experience categories are Oracle, Board and Vena Solutions. These category Leaders best communicate commitment and dedication to customer needs. While not a Leader, SAP was also found to meet a broad range of enterprise financial consolidation and close requirements.

Financial Consolidation and Close
Customer Experience

Providers	Grade	Performance
Oracle	A-	Leader 17.0%
Board	A-	Leader 16.9%
Vena Solutions	A-	Leader 16.8%
SAP	A-	16.7%
Prophix	B+	14.6%
Fluence	B+	14.5%
Wolters Kluwer	B	13.2%

Some software providers we evaluated have/did not have sufficient information available through their website and presentations. While all have customer case studies to promote success, some lack depth in articulating their commitment to customer experience and an enterprise’s financial consolidation and close journey. As the commitment to a software provider is a continuous investment, the importance of supporting customer experience in a holistic evaluation should be included and not underestimated.

Validation of the Software Provider

The Validation category assesses the software provider’s ability to support a customer through the life cycle of working with its products. It examines the provider’s commitment to the customer experience from leadership, processes and systems, and evaluates a software provider’s ability to assess its customer experience across front and back office and the marketing and communication of that experience. The viability of a software provider from financial growth, management and customer growth are evaluated, as are customer references and studies on the provider’s website and the use of feedback to improve the providers operations.

The Validation category also evaluates the customer journey across sales, onboarding, support, services and partners as well as examining the product releases and roadmap, and how the software provider utilizes formalized interactions with customers to improve products. Validation looks at the services, the support provided and the provider’s digital effectiveness to facilitate the customer relationship. It also examines the investment by the software provider in resources and improvements.

Financial Consolidation and Close Validation

Providers	Grade	Performance
Oracle	A-	Leader 86.4%
Board	A-	Leader 84.0%
Vena Solutions	A-	Leader 83.4%
SAP	A-	81.4%
Fluence	B++	77.8%
Prophix	B++	76.0%
Wolters Kluwer	B	64.5%

Source: Ventana Research
Financial Consolidation and Close Buyers Guide
© 2024 Information Services Group, Inc.

The research weights Validation at 10% of the overall rating. The Leaders here are Oracle, Board and Vena Solutions. While not a Leader, SAP was also found to meet a broad range of enterprise financial consolidation and close requirements.

Fluence

Company and Product Profile

Fluence, v. 2402.1, released February 2024

"Fluence is the only pure-cloud financial close, consolidation, and reporting solution for complex, high-growth companies. We help you close faster, report with confidence, and do more with less." – Fluence Technologies

Summary

Our analysis classified Fluence Technologies as a provider of Merit, receiving an overall grade of B+ with a 70.8% performance. Fluence Technologies' best grouped results came in Customer Experience with a 72.6% performance and a B+ grade, due in part to its B++ in Validation. In Product Experience, Fluence Technologies received a B+ grade with a 70.3% performance due to its 75.5% performance in Adaptability.

Challenges

Fluence Technologies' B+ grade in Product Experience was impacted by its B- in Reliability, where it could improve scalability features. Customer Experience was impacted by its B in TCO/ROI, where it could improve documentation of strategy and processes.

Strengths

Fluence Technologies performed best in Product Experience with a B+ grade, notably in Adaptability, receiving a B++ due to robust workflow features and high scope of API functionalities. Fluence Technologies performed best in Customer Experience with a B+ grade, notably in Validation, receiving a B++ due to high quality references and case studies.

Financial Consolidation and Close

Fluence

Category	Performance	Grade
Overall	70.8%	B+
Product	70.3%	B+
Adaptability	75.5%	B++
Capability	72.7%	B+
Manageability	67.7%	B
Reliability	59.9%	B-
Usability	69.0%	B+
Customer	72.6%	B+
TCO/ROI	67.4%	B
Validation	77.8%	B++

Appendix: Software Provider Inclusion

For inclusion in the Ventana Research Consolidation and Close Management Buyers Guide for 2024, a software provider must have a standalone application (not functionality included in an ERP or accounting system), be in good standing financially and ethically, have at least \$5 million in annual or projected revenue, more than 50 employees, sell products and provide support on at least two continents, and have at least 25 customers. The principal source of the relevant business unit's revenue must be software-related, and there must have been at least one major software release in the last 12 months.

To qualify for the Financial Consolidation and Close Buyers Guide, the software provider must meet criteria for Financial Consolidation and Close capabilities. To qualify for Financial Consolidation Buyers Guide, the product should include the following capabilities: consolidation process management, consolidation, intercompany management, journals and optionally support for auditing, natural language capabilities and AI/GenAI support. To qualify for the Close Management Buyers Guide, the product should include the following capabilities: process management, reconciliations management, journal creation, management and analysis and reporting, and optionally include audit facilitation, natural language processing capabilities and AI/GenAI support.

The research is designed to be independent of the specifics of software provider packaging and pricing. To represent the real-world environment in which businesses operate, we include providers that offer suites or packages of products that may include relevant individual modules or applications. If a software provider is actively marketing, selling and developing a product for the general market and it is reflected on the provider's website that the product is within the scope of the research, that provider is automatically evaluated for inclusion.

All software providers that offer relevant financial consolidation and close products and meet the inclusion requirements were invited to participate in the evaluation process at no cost to them.

Software providers that meet our inclusion criteria but did not completely participate in our Buyers Guide were assessed solely on publicly available information. As this could have a significant impact on classification and ratings, we recommend additional scrutiny when evaluating those providers.

Products Evaluated

Provider	Product Names	Version	Release Month/Year
Board	Board Group Consolidation and Reporting	Board 14	Board 2024
Fluence	Fluence	2402.1	February 2024
Oracle	Cloud EPM Financial Consolidation and Close	May 2024	May 2024
Prophix	Financial Consolidation	2024.1	March 2024
SAP	SAP S/4HANA Finance	2402	February 2024
Vena Solutions	Financial Close Management	Spring 2024	May 2024
Wolters Kluwer	CCH Tagetik Financial Close and Consolidation; Account Reconciliation	May 2024	May 2024

Providers of Promise

We did not include software providers that, as a result of our research and analysis, did not satisfy the criteria for inclusion in this Buyers Guide. These are listed below as “Providers of Promise.”

Provider	Product	Capabilities	Employees	Revenue	Customers
Microsoft	Dynamics365 Finance	No	Yes	Yes	Yes
OneStream	Financial Close and Consolidation Software	No	Yes	Yes	Yes

About Ventana Research

Ventana Research, now part of Information Services Group, provides authoritative market research and coverage on the business and IT aspects of the software industry. We distribute research and insights daily through the Ventana Research community, and we provide a portfolio of consulting, advisory, research and education services for enterprises, software and service providers, and investment firms. Our premiere service, Ventana On-Demand (VOD), provides structured education and advisory support with subject-matter expertise and experience in the software industry. Ventana Research Buyers Guides support the RFI/RFP process and help enterprises assess, evaluate and select software providers through tailored Assessment Services and our Value Index methodology. Visit www.ventanaresearch.com to sign up for free community membership with access to our research and insights.

About ISG Research

ISG Research™ provides subscription research, advisory consulting and executive event services focused on market trends and disruptive technologies driving change in business computing. ISG Research™ delivers guidance that helps businesses accelerate growth and create more value. For more information about ISG Research™ subscriptions, please email contact@isg-one.com.

About ISG

ISG (Information Services Group) (Nasdaq: [III](#)) is a leading global technology research and advisory firm. A trusted business partner to more than 900 clients, including more than 75 of the world's top 100 enterprises, ISG is committed to helping corporations, public sector organizations, and service and technology providers achieve operational excellence and faster growth. The firm specializes in digital transformation services, including AI and automation, cloud and data analytics; sourcing advisory; managed governance and risk services; network carrier services; strategy and operations design; change management; market intelligence and technology research and analysis. Founded in 2006, and based in Stamford, Conn., ISG employs 1,600 digital-ready professionals operating in more than 20 countries—a global team known for its innovative thinking, market influence, deep industry and technology expertise, and world-class research and analytical capabilities based on the industry's most comprehensive marketplace data. For more information, visit isg-one.com.
